

Merchant Growth AI – Working Prototype (Streamlit)

A working demo of the "Merchant Growth AI" dashboard for the Paytm ❤️ AI Hackathon, showing Billing AI, Inventory AI, Insights AI and Growth Suggestions for a sample store (Sri Lakshmi Kirana Store).

Run it locally

1. Install Python 3.9+ if you don't have it.
2. Open a terminal in this folder and install dependencies:

```
pip install -r requirements.txt
```

3. Start the app:

```
streamlit run app.py
```

4. It will open automatically at `http://localhost:8501`.

What's interactive

- **Billing AI** — click "Resend" next to a pending payment to simulate sending a reminder.
- **Inventory AI** — click "Reorder" on a low-stock item to simulate placing a reorder.
- **Insights AI** — 7-day sales chart, highlighting the best sales day (Saturday).
- **Growth Suggestions** — click "Apply discount" to simulate turning on the weekend discount.

All data is sample/mock data for demo purposes (matches the numbers in the pitch deck).

Deploy it for free (so judges can open a link)

1. Push this folder to a public GitHub repo.
2. Go to <https://share.streamlit.io> (Streamlit Community Cloud), sign in with GitHub.
3. Click "New app", pick your repo/branch, set the main file to `app.py`, and deploy.
4. You'll get a public link like `your-app-name.streamlit.app` to share/submit.
